

PLIDCO® SPLIT+SLEEVE***Stops the Leak Without Welding***

PLIDCO® Split-Sleeves are repair fittings that can be used to seal leaks caused by corrosion or damage on onshore and subsea pipelines. PLIDCO® Split-Sleeves are easy and safe to install. The leak is sealed once the fitting is fully torqued on the line. For a permanent repair, the fitting can be welded to the pipeline while it is under flow. Fittings not welded to the line can be removed, reconditioned by PLIDCO® and put back in the customers safety stock. Fittings are tested to 1.5 times the design pressure. Steel GirderRings prevent displacement & damage of packing during installation. Standard working pressure is 1000 maop. Higher working pressures are also stocked and various lengths are available. Custom emergency repair fittings are an option when a stock fitting is not applicable.

Viton packing is standard.
Buna-N, Silicone and other
materials are available upon request.

**Standard Body Material**

- SA-A350 Gr. LF2 Cl1
- SA-A516 Gr. 70
- Standard bolting is SA-A193 Gr. B7
with SA-A194 Gr. 2H nuts

**Options:**

- Marine epoxy paint for corrosion protection
- Hinges to ease with installation and handling
- Vents available per customer specifications
- Anodes for cathodic protection
- NACE MR0175/ISO 15156 compliant materials
